

Dean Hayden Student Research & Evidence Based Practice Grant

Your Word document abstract must contain all information indicated below.

Quantitative Research

Quantitative research involves the conduct of original research, with an emphasis on reporting quantitative research method used, objective measurement of variables, statistical analysis of collected data, and conclusions based upon results of statistical analyses.

Title

- Clear, concise, direct

Impact Statement

- 100 words or less
- How the study/abstract will impact or potentially impact the care that CRNAs deliver

Introduction

- 200 words or less
- Problem, literature review, significance, purpose/aims, hypothesis, research question(s)

Methods

- 250 words or less
- Design, intervention, setting, sample, measures, statistical analysis techniques

Conflict of Interest

- 200 words or less
- Specify conflict of interest, if any

References

- Provide the most important references, 5 or less

Qualitative Research

Qualitative research involves the conduct of original research that typically uses non-numerical data in an effort to understand phenomena, concepts, thoughts, or experiences. In-depth insights are gained through a variety of methods, including interviews, focus groups, and participant observations. Qualitative research is exploratory and seeks to explain 'how' and 'why' a particular phenomenon, or behavior, operates as it does in a particular context.

Title

- Clear, concise, direct

Impact Statement

- 100 words or less
- How the study/abstract will impact or potentially impact the care that CRNAs deliver

Introduction

- 200 words or less
- Problem, literature review, significance, purpose, research question(s)
- Theoretical framework

Methods

- 250 words or less
- Approach (phenomenology, ethnography, grounded theory, narrative analysis, inductive thematic analysis, etc.), data collection (observation, interview, focus group, survey, etc.), setting, sample selection

Conflict of Interest

- 200 words or less
- Specify conflict of interest, if any

References

- Provide the most important references, 5 or less

Evidence-Based Practice Project

A problem-solving approach that integrates a systematic search for and critical appraisal of the most relevant evidence (may or may not be research based) to answer a specific clinical, education, or administrative question, and then translates/applies current best available evidence to practice.

Title

- Clear, concise, direct

Impact Statement

- 100 words or less
- How the study/abstract will impact or potentially impact the care that CRNAs deliver

Background/Purpose/Question

- 200 words or less
- Define the nature and significance of problem
- Clearly stated purpose of your project
- Clearly stated question your project addresses

Methods/Evidence Search

- 250 words or less
- Method clearly described and reproducible
- Database search and keywords clearly described and reproducible
- Outline statistical/analysis plan as appropriate

Conflict of Interest

- 200 words or less
- Specify conflict of interest, if any

References

- Provide the most important references, 5 or less

Quality Improvement Project

A data-driven, systematic approach to improve specific internal systems, processes, costs, productivity, and quality outcomes within an organization by incorporating existing knowledge into process improvement activities.

Title

- Clear, concise, direct

Impact Statement

- 100 words or less
- How the study/abstract will impact or potentially impact the care that CRNAs deliver

Background

- 200 words or less
- Define the nature and significance of problem
- Clearly stated purpose of your project

Method

- 250 words or less
- Intervention description, method for assessing impact of intervention, analysis methods used to draw inference from the data

Conflict of Interest

- 200 words or less
- Specify conflict of interest, if any

References

- Provide the most important references, 5 or less
